# SAFEPOD™

## Plug & Go Permanent Outdoor Power *Fast – Simple – Versatile – Safe*

For pond pumps • garden lighting • power tools • garden sheds  
No wiring • No electrician • No fuss!

**P**ower outdoors just got easier! With the SafePod you can forget expensive electricians, costly cabling and disruptive digging. Just fix the weather-resistant SafePod to a vertical surface, plug in the RCD-protected cable and you're ready to go.

Power in the garden, shed, greenhouse or garage - quickly and safely, with no wiring or electrical knowledge required. Ideal for pond pumps, water features, lawnmowers, hedgetrimmers, pressure washers and more - SafePod gives you all the convenience of a permanent connection with none of the hassle. Unlike an extension lead, SafePod is safe to use in any weather, at any time of year - and it's tested and approved to the tough IP66 standard for permanent outdoor use to prove it.

Sockets and plugs are safely protected from the elements beneath the SafePod's transparent cover, while the cable entry point is covered by a snug-fitting seal that wraps around cables to keep water out. Each SafePod socket is individually switched with a visual indicator that makes it easy to see if power is on or off.

Whatever your outdoor electrical requirements, there's a SafePod to suit:

- **SafePod with two 3-pin mains sockets**
- **SafePod with timer and 3-pin mains socket**
- **SafePod with remote control for 3-pin mains socket**
- **SafePod with photocell for 3-pin mains socket**

If you need more outlets, or want to add a timer or remote control, just plug two modules together - or link them with 4-metre extension cables that come complete with waterproof connectors. The connectors 'click-fit' on to the SafePod and can't be pulled off accidentally. If you want to create a really permanent connection, armoured extension cables with waterproof connectors fitted are available for burying underground.

SafePod - fast, simple, versatile and safe. Everything electricity in the garden should be.
